Re: 40 CFR 60 Subpart KKKK: Initial Performance Test Extension Request
T2 EF Cogeneration LLC (CN604128926)
T2 Pettus Cogen (RN106495526)
Permit By Rule Registration # 105419
Bee County, Texas

To Whom It May Concern:

On behalf of T2 EF Cogeneration LLC, Flatrock Engineering and Environmental, Ltd. respectfully submits the following request for testing date extension for the performance test required in 40 CFR 60 Subpart KKKK for the one (1) 14.38-MW Titan 130-19501S axial turbine (T-1) at the T2 Pettus Cogen, a cogeneration facility, in Bee County, Texas. The reason for the extension request is as follows:

The power demands of the end users were lower than expected and are still lower than expected at this point in time. Since the power demands were less than the full power output of the turbine, the turbine was being operated at a reduced load. This limitation prevented an accurate performance test from being completed.

A second unit has since been installed, and T-1 is now a back-up unit. T-1 will only operate when the second unit is down for maintenance.

T2 EF Cogeneration LLC estimates a potential testing date of October 2013 for this unit. Should you have any questions or concerns, please feel free to contact me at (210) 569-6684 or at catherine.johnson@flatrockenergy.net.

Sincerely,

Catherine Johnson
